

VECTOR

Vector Controls and Automation Group is seeking an Analyzer / Instrument / Instrumentation / I&E / Electrical / Calibration Technician to perform service related work at several major chemical facilities in the Greater Houston and Gulf Coast region. The candidate will be required to provide installation, startup, commissioning, and maintenance of instrumentation, controls and analyzers. There will also be interaction with the customer on many levels (i.e. operations, maintenance, planning, environmental health & safety, and engineering). The ideal candidate will provide expertise to ensure that the products perform and meet customer expectations. This position will be seen as an extension of the customer's maintenance group. The candidate will also be required to follow all customer and Vector CAG safety policies and procedures.

- Operate a program that focuses on personal and process safety (Zero accidents, releases, or process down time).
- Maintain an open communication with customer.
- Maintain 100% compliance with all Vector CAG and customer site specific training.
- Complete all scheduled preventative maintenance (PM) work orders as scheduled.
- Continue to make suggestions for the optimization of process control related to existing analytical (pH) loops.
- Provide subject matter expertise to customer for any pH, conductivity, or other analytical issues that may be presented.

Desired:

- Computer skills (i.e. MS Office Suite)
- Ability to work with minimal oversight
- Good written and oral communication skills
- Team player
- Ability to rotate "On-Call" responsibilities

Required:

- Knowledge of electronics, process diagrams (loop and data sheets), and test equipment (multi-meters, loop calibrators, oscilloscopes, etc.)
- Knowledge of instrumentation. Analytical, pneumatic, electronic and smart.

Preferred:

- Associates degree in Instrumentation Technology or a technical degree with at least 3+ years in process instrumentation equipment installation maintenance / troubleshooting (preferred)
- Bachelor's degree in Control and Instrumentation or a technical/engineering degree with at least 3+ years in process instrumentation equipment installation maintenance / troubleshooting (preferred)
- Related technical military experience with at least 3+ years in process instrumentation equipment installation maintenance / troubleshooting
