

FLARE SYSTEMS AND CONTROL

INDUSTRY SEGMENTS

Upstream Midstream
Oil & Gas

Downstream Oil & Gas

Petro/Chemical

Vector CAG is well versed in how to "DO FLARES RIGHT". Flare systems are some of the MOST demanding applications in the plant because of large range of flows, characteristics of every product in the plant and environmental requirements to meet EPA limits make these opportunities a challenge for most suppliers. Our capabilities that we started under RSR (Refinery Sector Rule) is easily transferred to new CSR (Chemical Sector Rule) and to ALL of our customers that have flare systems. Because of our relationships with top manufacturers of flare flowmeters, BTU analysis, steam flow, natural gas flow, level, pressure and temperature products, we are in a unique position to offer the entire solution including the software and controls to help customers meet new CSR requirements.

MANUFACTURING PARTNERS

FLARE SYSTEMS AND CONTROL

Vector CAG offers a complete flare systems control strategy and a turn key solution for the upstream, midstream, oil & gas and petro/chemical customers.
