

**THURSDAY,
FEBRUARY 18**

1:00PM-1:45PM CST

2021 LEARN FROM THE EXPERTS WEBINAR/VIDEO SESSION

You're invited to join the Vector Controls & Automation Group for our "Learn From The Experts" educational webinar/video conference sessions. These sessions are an online technical training webinar or video conference and are intended for our customers in the automation, instrumentation, mechanical and analytical fields. The complimentary 45 minute training sessions are conducted by Vector CAG personnel and industry guest speakers.

COMBUSTIBLE & TOXIC WIRELESS GAS DETECTION

Each industry and each application within, has its own requirements, challenges and legal regulations. A flame and gas detection system that fits exactly to your site won't necessarily (don't want to rule out similarities from one site to the next) fit to another one. Toxic gases and vapours or the leak of oxygen can be a hazard in various industries so the use of a wireless transmitter for continuous monitoring of toxic gases and oxygen is important. Join Vector CAG and Dräger as they share with you wireless gas detection, how it integrates into safety instrumented systems and the different toxic gas detectors and specific requirements that need to be considered with every project.

Additionally, during the webinar you will hear more on;

- How does wireless gas detection work?
- Differences between wireless HART and ISA100 Wireless™ standard.
- Overall cost savings of wireless gas detection

Vector Host and Moderator

Dräger Subject Matter Expert

Chad Nelson
*Business Development Manager -
Fire and Gas Specialist*

Mark Seid
*Regional Sales Manager -
Fire and Gas Detection Systems*
